

05/11/16 (10:13am – 11:13am)

- Elevated methane concentrations (up to 8.6 ppm) were measured near the SS-1 well.
- Elevated methane concentrations (up to 13 ppm) were measured approximately 150-200 ft east of SS-25.
- Overall methane levels around SS-25 have been on a decreasing trend.

05/12/16 (10:05am – 11:20am)

- Elevated methane concentrations (up to 15.1 ppm) were measured approximately 150-200 ft east of SS-25.
- Overall methane levels around SS-25 have been on a decreasing trend.

05/13/16 (09:41am – 11:01am)

- Elevated methane concentrations (up to 10.2 ppm) were measured approximately 150-200 ft east of SS-25.
- Overall methane levels around SS-25 have been on a decreasing trend.

05/18/16 (10:20am – 11:19am)

- Elevated methane concentrations (up to 7.5 ppm) were measured near the SS-1 well.
- Elevated methane concentrations (up to 19.1 ppm) were measured along the eastern slope of SS-25.

05/25/16 (10:01am – 10:50am)

- The highest methane concentrations (up to 23.9 ppm) were measured near the SS-26 well located west of SS-25.
- Elevated methane concentrations (up to 9.1 ppm) were measured approximately 150-200 ft east of SS-25.
- Overall methane levels around SS-25 have been on a decreasing trend.

01/10/16 (09:06am – 10:13am)

- The highest methane concentrations (up to 21.4 ppm) were measured near the SS-26 well.
- Elevated methane concentrations (up to 11 ppm) were measured near the SS-1 well.
- Only slightly elevated methane concentrations (up to 5 ppm) were measured approximately 150-200 ft east of SS-25.
- Overall methane levels around SS-25 have been on a decreasing trend.
