AB 2766 Funds Report from Motor Vehicle Registration Fees – Past Reports

I. BACKGROUND

On-road motor vehicles, including cars, trucks and buses make up the most significant sources of air pollution in the South Coast Air Basin (SCAB). Vehicle emissions contribute to unhealthy levels of ozone, toxic air contaminants such as benzene, and particulate matter from diesel exhaust. To protect public health, Assembly Bill 2766 was signed into law in September 1990. Section 44223 of the H&SC authorized a \$2 motor vehicle registration fee surcharge, effective April 1991, to fund the implementation of programs designed to reduce air pollution from motor vehicles, and to implement the California Clean Air Act of 1988. H&SC Section 44225 authorized a subsequent increase in this fee to \$4 effective April 1992. In 2004, a \$2 surcharge was added pursuant to H&SC Section 44229 to provide a long-term source of funding for expansion of the Carl Moyer Memorial Air Quality Standards Attainment program and to drive early introduction of clean air technology such as cleaner diesel engines, a Lower-Emission School Bus Program, and accelerated vehicle retirement and repair programs.

From the first \$4 of the funds, AB 2766 requires that fees collected by the Department of Motor Vehicles be subvented to the South Coast Air Quality Management District (AQMD) for the purpose of funding three programs with a prescribed allocation as follows: the local government Subvention Fund Program portion (40%) is distributed on a quarterly basis to South Coast Basin cities and counties based upon their prorated share of population to implement projects that reduce emissions from mobile sources; the AQMD Program Fund (30%) goes towards agency planning, monitoring, research, and other activities that reduce mobile source emissions; the Discretionary Fund Program (30%) is administered by the Mobile Source Air Pollution Reduction Review Committee (MSRC), which awards money to project proponents that also reduce motor vehicle emissions. AB 2766 funded projects have many additional benefits including increasing transportation alternatives, relieving traffic congestion, conserving scarce energy resources, and reducing greenhouse gas emissions.

II. REPORTING

This staff report addresses solely the local government subvention portion of AB 2766 monies by accounting for projects, financial expenditures, emissions reduced, and cost-effectiveness of projects implemented through the AB 2766 Subvention Fund Program during FY 2008-09.

AB 2766 fees are collected by the Department of Motor Vehicles and subvented to the AQMD on a monthly basis. The AQMD Finance Division disburses the AB 2766 revenues to local governments quarterly. During FY 2008-09, two new cities were added to the AB2766 Program, Menifee and Wildomar, bringing the total number of local governments (Attachment A) eligible to receive AB 2766 funds (Motor Vehicle Fees) to 160. Pursuant to H&SC Section 44243 (b)(1), newly incorporated cities may receive subvention funds provided they adopt and transmit to the AQMD the specified ordinance within 90 days of official incorporation.

Cities and counties complete and submit an annual report to the AQMD identifying the revenues received, project expenditures, emissions reduced, and cost-effectiveness of each project implemented during the preceding fiscal year. Staff then reviews the data which includes fund expenditures, administrative costs, fund balances, the earmarking of ending balances, emission reductions, and cost-effectiveness. A summary of the information (Attachment B) is forwarded to the California Air Resources Board (CARB) upon consent of the AQMD Governing Board.

III. TECHNICAL ASSISTANCE

Purpose

As directed by the Governing Board in 1998, the AQMD's AB 2766 staff continues to serve as a resource to cities and counties by providing technical guidance for project development and implementation. AQMD places special emphasis on the selection of cost-effective, quantifiable mobile source emission reduction Subvention Fund projects that meet the needs of the local jurisdiction. AQMD staff assists local jurisdictions with emission reduction calculations and advises them in the preparation of their annual reports.

Although AQMD staff reviews and evaluates the AB 2766 reports submitted, AQMD does not have the authority to “approve” or “disapprove” local government’s use of AB 2766 funds for specific projects. Rather, staff is authorized to provide guidance according to AB 2766 criteria and guidelines established by CARB.

AQMD Guidance

To provide guidance in identifying projects that are eligible for AB 2766 funding, an AB 2766 Subvention Fund Program Resource Guide was developed and is updated as needed and made available to local governments. Project descriptions and examples outlined in the Resource Guide are consistent with CARB’s criteria and guidelines for the use of Motor Vehicle Registration Fees, which focus on strategies that directly reduce motor vehicle emissions.

Activities

The AB 2766 staff continues to provide recommendations to CARB staff on ways to improve the automated software for local government staff to report their annually funded projects. AQMD staff conducted, as in prior years, technical training sessions to local government representatives and Council of Government (COG) staff to familiarize them with the updated electronic program and to solicit feedback on its usefulness. Ten AB 2766 technical training sessions were conducted by AQMD staff during the months of January and February 2010.

The AQMD staff provided technical assistance which consisted of meetings with local government staff to address program challenges unique to specific cities/counties, assisted with emissions calculations and provided hands-on instructions in the use of the automated reporting system. Staff will continue to provide enhanced AB 2766 outreach to city mayors, city managers and other decision making local government staff, in order to further educate and encourage implementation of quantifiable, SIP credible, more cost-effective projects that yield direct mobile source emission reductions. These efforts will assist local governments in achieving the 4 ton NO_x reduction, assigned to the AB 2766 Subvention Program in the 2007 AQMP, by the 2014 PM_{2.5} attainment date.

The AQMD staff has reviewed and evaluated the FY 2008-09 annual program reports for the 160 participating local jurisdictions. The results are summarized in the Program Data section of this report.

Several local governments give a portion of their AB 2766 subvention funds to their respective Council of Governments (COGs) in order to pool their resources to implement projects that reduce air pollution from motor vehicles. Table 1 is a summary of the COG activities for COGs receiving AB 2766 funds from their member cities and is provided for informational purposes only. To monitor, track and ensure the cost effectiveness of subvention funds given by local governments to the COGs, local governments have been asked to provide information on the use of the AB 2766 funds that they give to their COGs for mobile source emission reduction projects. COGs provide summary reports to their member cities and the AQMD identifying the funding amount and description of AB 2766 funded projects.

Summary of COG Activities

COG Name	Expenditure Amount*	Project Description**
<i>Western Riverside</i>	\$73,500	Ongoing Clean Cities Coalition outreach.
<i>San Gabriel Valley</i>	\$129,173	Coordinated congestion pricing, traffic synchronization and low emission fleet vehicle workshops; ongoing corridor and rail extension planning activities.
<i>Gateway Cities</i>	\$151,908	91/105 Corridor study; collaboration on the I-710 Major Corridor Study; Needs Assessment Study for the SR91/605 Corridor and supported the Rivers and Mountains Conservancy for regional expansion of open space and bikeways; Truck Impacted Intersections Project for improvements to major intersections; pursuing an ITS initiative to improve traffic flow on freeways and highways along the Goods Movement corridor.
<i>Coachella Valley</i>	\$255,572	Regional PM ₁₀ Street Sweeping Program which uses alternative fuel equipment to sweep approximately 40,841 curb miles of regional arterials in the Coachella Valley.

IV. PROGRAM DATA

Project Categories

Local governments are required, in accordance with AB 2766 legislation, to utilize the subvented funding dollars they receive to implement projects that reduce motor vehicle emissions. The AQMD Resource Guide summarizes CARB's fund usage criteria and identifies appropriate strategies that, through careful planning and design, will most cost effectively and efficiently reduce emissions from mobile sources. The following is the list of AB 2766 Project Categories (11) and examples of projects that meet the criteria and guidelines established by CARB for AB 2766 fund expenditures:

1. **Alternative Fuels/Electric Vehicles** - Promoting the use of alternative fuels by purchasing or leasing vehicles powered by compressed natural gas, propane, full hybrids that meet SULEV certification standards, fuel cell and electric vehicles; conversion or re-powering conventionally fueled vehicles to an alternative fuel. Installation of alternative fuel infrastructure.
2. **Vehicle Emissions Abatement** - Utilizing cleaner diesel engines, and ensuring that vehicles are properly tuned and maintained; replacing dirty off-road engines with newer,

cleaner diesel engines or installation of particulate trap retrofits for diesel engines; participation in an old vehicle scrapping program.

3. **Land Use** - Implementation of land use strategies that make it easier for pedestrians to walk, bicycle or use public transit, thus reducing automobile trips and emissions; planning, designing and developing facilities that discourage and decrease the use of automobiles.
4. **Public Transportation** - Reducing single occupancy vehicle trips by providing fare subsidies, rail feeder operations, and marketing; purchase or lease of alternative fueled vans, buses or shuttles for shuttle service. Provide public transportation facilities and supporting transit information. Support public transit alternative fuel activities by developing, designing, coordinating and constructing alternative fuel infrastructure.
5. **Traffic Management and Signal Coordination** - Installation of signal synchronization systems, design and installation of pedestrian islands, turning lanes, pedestrian traffic controls, changeable message signs and mobilization of freeway tow trucks.
6. **Transportation Demand Management** - Reduction of single occupancy vehicle trips by encouraging carpooling, vanpooling, biking, walking, use of public transit, telecommuting, or implementation of compressed work week schedules. Developing programs that focus on reducing trips to special event centers or other attractions; support of Park and Ride facilities.
7. **Market Based Strategies** - Developing and implementing user fees or congestion charges to encourage behavioral changes for consumers to use less congesting or less polluting forms of transportation; implementation of Parking Cash-out Programs.
8. **Bicycles** - Designing, developing and/or installing bikeways or establishing new bicycle corridors; making bicycle facility enhancements/improvements by installing bicycle lockers, bus bike racks; providing assistance with bike loan programs (motorized and standard) for police officers, community members and the general public.
9. **PM Reduction Strategies** - Measures that prevent deposits of dust and other materials from build-up on roadway surfaces; measures to remove materials previously deposited on roadways. Implementing projects designed to significantly reduce or eliminate minute particles of dust (PM₁₀) from roadway surfaces such as paving roads, shoulders, and purchasing AQMD Rule 1186.1 compliant street sweepers.
10. **Public Education** - Ongoing air quality outreach campaigns that educate the public about options that reduce single occupancy vehicle trips when launching new programs such as shuttle services, transit station openings, HOV lanes, and rideshare incentive programs. Dissemination of updated printed materials; developing and conducting group specific presentations; participation in or sponsorship of workshops, forums and conferences.
11. **Miscellaneous Projects** - The “Miscellaneous Project” category allows local jurisdictions to identify projects that reduce mobile source emissions, but are not specifically listed or identified in the AB 2766 Program guidelines.

Project Funding & Quantification

A financial summary of how local governments in the four counties used their AB 2766 subvention funds during FY 2008-09 is provided in Table 2. Local governments spent more of the AB 2766 subvention funds, \$19.9 million, on mobile source emission reduction projects than they received, \$19.2 million, from motor vehicle (MV) fees. They spent 36% of their combined beginning balance and MV fees received, which is a slight increase to what occurred in FY 2007-08 when cities and counties spent 34% (\$17.9 million) of the total beginning balances and MV fees received.

Table 2 also shows that of the \$36.3 million ending balance that local governments reported, approximately \$31.7 million or 88% of the ending balance was earmarked for future projects. This is a significant increase to what occurred in FY 2007-08 when only 76% of the ending balance was earmarked for future projects. Local governments have the ability to carryover earmarked fund balances indefinitely, which provides the flexibility of saving for future large projects or to secure additional co-funding. Riverside County shows a negative fund balance after earmarking because local jurisdictions have the ability to forecast and earmark based on funds that they anticipate receiving.

Table 2
FY 2008-09 Motor Vehicle Funds Financial Summary (As Reported by Local Jurisdictions)

County	Beginning Balance	MV Fees Received	Project Spending	Ending Balance ¹	Earmarked Funds	Funds Remaining After Earmarking
Los Angeles	\$14,783,250	\$11,216,211	\$11,872,896	\$14,531,090	\$11,918,371	\$2,612,719
Orange	\$9,789,445	\$3,609,023	\$3,726,892	\$9,869,330	\$7,497,813	\$2,371,517

San Bernardino	\$5,007,634	\$1,951,042	\$1,648,941	\$5,414,714	\$4,286,864	\$1,127,850
Totals*	\$36,049,695	\$19,217,553	\$19,880,762	\$36,261,851	\$31,740,900	\$4,520,951

*Totals may vary slightly due to rounding.

Table 3 shows the historical funding, project expenditure levels and funds earmarked by local governments over the last seven fiscal years. Motor Vehicle funding subvented to local governments continues to decline, however, local jurisdictions spent substantially more of their AB 2766 funds, on average. Cities receiving AB 2766 funds have earmarked more funds in FY 2008-09 than in any other reporting year of the program, further demonstrating local government awareness of the need for more advanced planning.

¹ The ending balance represents the beginning balance and MV Fees received, minus project spending. Interest earned and administrative costs are reflected, but not shown. Interest earned and Administrative costs are fully detailed in Appendix B.

Table 3
History of MV Funds Financial Summary

Fiscal Year	Beginning Balance	MV Fees Received	Project Spending	Ending Balance	Earmarked Funds	Funds Remaining After Earmarking
2002-03	\$26,442,883	\$17,819,579	\$19,030,646	\$25,861,798	\$20,340,704	\$4,891,112

Table 4 identifies, by county, the number of projects funded by local governments and, of those, the number and percentages of quantified emission reductions achieved during FY 2008-09. Los Angeles County has the majority of the cities in the South Coast Basin and had more projects funded (190) than the other three counties collectively. Orange County had the second highest number of projects funded (75), followed by Riverside County (61) and San Bernardino County (30). Relative to quantified emission reductions, Orange County yielded the highest percentage of quantified projects since reporting FY 03/04 (65%).

Table 4
FY 2008-09 Local Government Project Reporting and Emission Reduction Quantification

County	Number of Local Governments Reporting	Number of Projects Funded	Number of Projects with Emission Reductions Quantified	Percent of Projects with Emission Reductions Quantified
Los Angeles	82	190	90	47%
Orange	35	75	49	65%
Riverside	26	61	33	54%
San Bernardino	17	30	19	63%
Totals	160	356	191	54%

Table 5 shows overall that the last seven fiscal years have resulted in project quantification below 50% of the total number of projects funded by local governments, with the exception of last fiscal year, peaking in this reporting cycle at 54%. CARB has provided methodologies for emission

reduction quantifications with corresponding emission factors for some of the most widely implemented transportation-related air quality projects. The annual emission reductions then are calculated to estimate the cost-effectiveness of the projects. Emission reductions from several of these projects are difficult to quantify or cannot be quantified, such as alternative fuel and electric vehicle infrastructure projects, public education and outreach programs and projects that include research and development.

Table 5
Project Quantification History

Year	Number of Projects	Projects with Emission Reductions Quantified	Percent of Projects
FY 2002-03	405	189	47%
FY 2003-04	380	184	48%
FY 2004-05	397	178	45%

FY 2007-08	340	175	51%
FY 2008-09	356	191	54%

The data in Table 6 shows the FY 2008-09 expenditures made in ten of the eleven AB 2766 project categories. There were no Market Based Strategy projects reported for FY 2008-09. Table 6 shows expenditures beginning with the project category having the highest expenditures and ending with the project category that had the least amount of local government spending. The four project categories that reflect the highest spending percentages are Transportation Demand Management (TDM) (33%), Alternative Fuels/Electric Vehicles (30%), Traffic Management (11%) and Public Transportation (9%). Projects funded in these four project categories comprised 82% of the \$19.9 million expended on projects during FY 2008-09, or about \$16.4 million.

In addition, the two highest spending categories, Transportation Demand Management (TDM) and Alternative Fuels/Electric Vehicles, comprised of 63% or about \$12.5 of the \$19.9 million program expenditures. Much of these funds were spent towards AQMD rule compliance related activities, such as implementation of employee rideshare programs and compliance with AQMD Clean Fleet Rules.

Table 6
Expenditures by Project Category

Project Category	Project Spending*	Percent of Spending*	# of Projects
Transportation Demand Management	\$6,560,322	33%	79
Alternative Fuels/Electric Vehicles	\$5,920,676	30%	88
Traffic Management	\$2,088,231	11%	28

Emission Reductions & Cost-Effectiveness

Table 7 summarizes, by county, the number of projects funded, project spending and emissions reduced. Local governments in Los Angeles County reported the vast majority of project spending, \$11.9 million (60%) and also represented the majority of annual emission reductions, 3,626 tons (94%). During the FY 2008-09, a total of 3,872 tons of emissions were reduced by projects funded with AB 2766 Subvention Funds. These reductions represent a decrease to what occurred in FY 2007-08, when implementation of local government's AB2766 projects resulted in the reduction of 4,699 tons per year of emissions.

Table 7
FY 2008-09 AB 2766 Project Spending and Emissions Reduced

County	Number of Projects Funded	Project Spending	Emissions Reduced² (Tons/Yr)
Los Angeles	190	\$11,872,896	3,626
Orange	75	\$3,726,892	57
Riverside	61	\$2,632,033	167
San Bernardino	30	\$1,648,941	22
Total	356	\$19,880,762	3,872

² Emissions reduced account for total reduction (VOC, NOx, PM₁₀ and CO/7) from Air Fund expenditures. Air Funds consist of the MV Fees and funding both from the state Carl Moyer Program and the AB 2766 Discretionary fund. Refer to Attachment B: Average Cost-Effectiveness by Project.

Table 8 provides emission reduction and cost-effectiveness information within the AB 2766 project categories. As in previous years, the Traffic Management category represented the bulk of emissions reduced for FY 2008-09. Traffic Management, which includes traffic calming and traffic signal synchronization projects, accounted for 3,331 tons of emissions reduced, or about 86% of the 3,872 tons of total emissions reduced from all AB 2766 project categories. However, only 11% (refer to Table 6) of the total funding was spent within this category. The cost effectiveness of the Traffic Management category was greatly skewed by one project which claimed 3,290 tons per year of emissions reduced. Less significantly, the TDM category claimed 340 tons per year of emission reductions; accounting for approximately 33% of the total annual AB 2766 project spending (refer to Table 6). The Public Transportation category claimed 139 tons in FY 08-09, a significant increase in comparison to the reported 32 tons of emissions reduced in FY 07-08.

Within the Alternative Fuels/Electric Vehicle project category, emission reductions slightly decreased from the 21 tons reported in FY 2007-08 to 20 tons for FY 2008-09. However, as a result of the AB 2766 Staff's continued efforts throughout the reporting year to maintain ongoing and increased technical support and program outreach, jurisdictions are implementing more cost-effective, quantifiable emission reduction projects. Local governments are being encouraged to seek and to create opportunities to coordinate with neighboring cities, jurisdictions and COGs to implement projects that will result in shared, mutual emission reduction benefits, while potentially sharing costs and resources. Earmarking funds for projects that are planned for future implementation or that are in need of funding assistance has helped program administrators to understand the importance of advanced financial planning and has encouraged them to research other sources and ways of obtaining and securing matching funds.

The last column in Table 8 identifies the total air funds cost-effectiveness (dollar per pound) of emissions reduced. The "Air Funds" consist of the Motor Vehicle Fees, and if applicable, funding from the state Carl Moyer Program, and the Mobile Source Air Pollution Reduction Review Committee (MSRC) funding pursuant to CARB's methodology.

The cost-effectiveness of all project categories ranges, as shown in Table 8, from \$0.15 - \$15.78 per pound of emissions reduced in FY 08-09. The overall total average cost-effectiveness was computed as \$1.10 per pound of emissions reduced. As previously mentioned, there was one skewed project within the Traffic Management category that had a significant effect on the overall cost-effectiveness. If that project had been excluded from the total number of projects implemented, the average cost-effectiveness would have been \$6.65 per pound of emissions reduced instead of \$1.10 per pound, which is still below the \$10 per pound cost-effectiveness threshold established by CARB. Various factors, such as funding amounts, project design, emission factor efficiencies and trip and vehicle miles traveled reductions all help to determine how cost-effective one project is compared to another and determines the final project category cost-effectiveness as shown in Table 8.

*Totals may vary slightly due to rounding.

Figure 1 shows the historical funding and total project expenditure levels by local governments over the last seven fiscal years. The project expenditures are expressed in both total project expenditures and quantifiable project expenditures. Motor Vehicle funding subvented to local

³ Emissions reduced account for total reductions (VOC, NOx, PM₁₀ and CO/7) from Air Fund expenditures. Air Funds consist of the MV Fees and funding from the state Carl Moyer Program and the AB 2766 Discretionary fund. Refer to Attachment B: Average Cost-Effectiveness by Project.

⁴ Emissions reduced (tons/year) is determined by dividing by 2,000 lbs/ton. Totals may vary slightly due to rounding.

⁵ Cost effectiveness is determined by multiplying default capital recovery factors (amortized formula reflecting project life and discount rate) by total funds, then dividing those annualized funds by annual emission reductions. Refer to Attachment B: Average Cost-Effectiveness by Project. Emission reductions were based on EMFAC 2007, Version 2.3 (Nov 1, 2008).

⁶ The "Miscellaneous Project" category represents non-quantified projects that were not classified under the major program categories (i.e., payment of membership dues to Council of Governments to support air quality activities and regional air quality coordination).

⁷ The overall cost-effectiveness would be \$6.65 with the exclusion of one outlying project which skewed the cost-effectiveness down to \$1.10.

governments has decreased over the last two years. The quantifiable project expenditures represent 65% (\$13 million) of the total project expenditures (\$19.9 million) for FY 2008-09.

* In current dollars.

**In most instances, Total Project Expenditures are slightly more than Motor Vehicle Fees Received due to funds available from carryover balances.

In Figure 2, emission reductions as well as both total and quantifiable expenditures adjusted for inflation are shown. Approximately 3,872 tons (VOC, NO_x, PM₁₀ and CO/7) or about 11 tons per day of pollution was eliminated during FY 2008-09 from \$12.98 million expended by local governments compared to 4,699 quantifiable reductions achieved in FY2007-08 from \$13.06 million.

- ▲— Total Expenditures
- Emission Reductions
- Project Expenditures w/Quantifiable Reductions

The history of emission reductions and cost-effectiveness is shown in Table 9. This table reflects the total amount of emissions reduced annually from projects funded. The average cost-effectiveness of projects funded during FY 2008-09 was approximately \$1.10 per pound of emissions reduced. It should be noted that the cost effectiveness calculation was performed in current (nominal) dollars. The cost-effectiveness numbers would have been lower in real dollars.

The average cost-effectiveness figure is determined by dividing the amortized Air Fund dollar amount (\$8.6 million) which is associated with quantified projects, by the total amount of emission reductions (7.7 million lbs.). Table 9 illustrates the progress that has been made since FY 2001-02 in reducing emissions. Emission calculations are based on emission factors at the time of each reporting cycle. As vehicles become cleaner and emission factors decrease from year to year, it would take more cost-effective projects to maintain the same level of emission reductions. Accordingly, slight decreases in emission reductions in subsequent years should not necessarily be perceived as diminished accomplishments by the AB 2766 program.

Table 10 shows the project subcategories with the highest Motor Vehicle Fee funding allocations within each project category. Each major category is comprised of subcategories for the purpose of emission reduction quantification. Over the last four fiscal years, the three project subcategories with the highest expenditures were Employer Based Trip Reductions, Alternative Fuel Vehicle Purchases and Traffic Flow or Signalization. The total sum of expenditures in these three subcategories indicated that there was a minor decrease in the percentage of funding dollars spent (56%), among the subcategories with the highest funding allocations compared to 58% reported in FY 2007-08, the previous annual reporting cycle. The combined total expenditure for the top three subcategories is approximately \$11 million. This amount represents more than half of the \$19.9 million MV Fees spent on mobile source projects during FY 2008-09.

Public Education (8)	Short Term PE [promote transit, rideshare] (4)	\$117,908	64%

*Misc. Projects has no subcategory. This amount is the total expenditure for this category.

Figure 3 depicts a comparison by percentages of the expenditures made in all project categories during FYs 2006-07, 2007-08 and 2008-09. The Transportation Demand Management (TDM) project category showed a decrease from 38% to 33% of total Motor Vehicle Fee expenditures from FY 2007-08 to FY 2008-09, while the categories of Public Transportation, PM Reductions and Land Use had increases in project spending. The Public Transportation Facilities project subcategory showed an increase in project spending over Transit Operations.

Summary of Local Government Reports

The FY 2008-09 Subvention Fund local government reporting is summarized below:

(↑ represents improvement, ↓ represents a decrease, ↔ represents no change)

↓ Cost-Effectiveness:

The overall cost-effectiveness of projects quantified shows a slight increase (projects implemented were less cost-effective) in the FY 2008-09 reporting cycle of \$1.10 from \$.98 per pound reported in FY07-08.

↓ Emission Reductions:

Emission reductions reported from all quantifiable projects implemented has decreased from 4,699 tons in FY 2007-08 to 3,872 tons of pollution eliminated for FY 2008-09.

↑ Earmarked Funds:

The percent of the ending balances earmarked for future projects has significantly increased from 76% in FY 2007-08 to 88% in FY 2008-09.

↑ Projects with Emission Reductions Quantified:

The percentage of projects quantified has increased from 51% in FY 2007-08 to 54% in FY 2008-09.

V. FUTURE EFFORTS

- AQMD technical staff will continue to educate and encourage cities to implement quantifiable mobile source emission reduction projects and to fund projects that will improve the program's overall cost-effectiveness by meeting with and maintaining an open, ongoing dialogue with city mayors, city managers and other decision making local government staff specifically educating them on the benefits of implementing SIP credible, more cost-effective, quantifiable projects that result in direct emission reductions.
- In coordination with CARB, AQMD staff will highlight an AB 2766 Preferred Projects list, identifying specific SIP credible projects that will yield quantifiable emission reductions to help achieve the additional NO_x reductions, identified in the AQMP for the SCAB region, by the 2014 PM_{2.5} attainment date.
- AQMD staff will continue to keep local jurisdictions informed of other potential air quality funding opportunities beyond the AB2766 program as they become available.
- AQMD staff will continue to maintain an outreach presence through meetings with local governments' AB 2766 Coordinators, new local government staff, and COG staff to: 1) Provide technical guidance on program changes, modifications and/or enhancements; 2) Inform them of the legal constraints of AB 2766 spending; 3) Provide technical assistance on tracking, calculating and reporting on projects that will yield quantifiable emission reductions; 4) Explain and discuss the importance of earmarking funds; 5) Train them on the automated reporting process and; 6) Respond to general questions about the AB 2766 Program.
- AQMD staff will continue to coordinate with COG staff to ensure accurate reporting on the annual summaries submitted to AQMD of their project activities funded with AB 2766 funds received from member cities and counties. Emphasis will continue to be placed on the importance of ensuring that projects funded by the COG adhere to the AB 2766 project criteria.
- AQMD staff will continue to encourage local governments to provide feedback to AQMD and to their respective COGs on various AB 2766 matters, including but not limited to the annual reporting process, Subvention funds allocated towards COG sponsored projects and the AB 2766 Resource Guide.
- AQMD staff will provide assistance to local governments in their selection and quantification of projects that have co-benefit reductions that meet AB32 and/or SB 375 objectives.
- AQMD and CARB staff will continue to work on streamlining the reporting process to improve the program efficiency and accuracy of program data submittal.
